Inspiration Breakdown + Reference Rules Sheet — INS-20785b5fa6bd

Analysis date: 2026-10-26 · Skill: inspiration-breakdown (Skill 1 of 3) · Analyst scope: reference analysis only (no adapted script, prompts or storyboard).

Evidence key: Observed = seen in decoded frames · Observed-captions = read from burned-in captions · Inferred = interpretation · Unknown = not established. **Important limitation:** the audio track was **not transcribed or listened to** (no speech-to-text model could be loaded in this environment). All "spoken" wording below is **derived from the burned-in captions** and labelled *caption-derived*. Caption timing tracks measured audio pauses closely (see A21), so the captions very probably mirror the VO, but voice type, exact wording, emphasis and music identity are **Unknown**.

A. Reference Identity

```
Ref ID:           INS-20785b5fa6bd (no creative ID supplied — derived from filename media-20785b5fa6bd.mp4)
Source:           media-20785b5fa6bd.mp4 (uploaded file, full video, no excerpt offset)
Duration:         55.055 s video (55.167 s container/audio) | MP4 H.264 + AAC stereo 48 kHz | 720×1280 | 9:16 vertical | 29.97 fps (1,650 frames)
Language:         English (on-screen text); spoken language Unknown — audio not transcribed
Inspection:       Partial — all frames decoded (cuts via automated scene detection, visually spot-checked; 2 fps full-frame + 6 fps caption-strip sampling; first/last
frame of every shot); audio measured only (spectrogram, RMS per 0.1 s, loudness), not listened to or transcribed
Timing precision: Cuts frame-verified (±1 frame); caption states estimated (±0.17 s, 6 fps sampling); audio events player-measured (0.1 s windows)
```

B. Creative Architecture

Format: Problem-agitation → solution narrated explainer, fully computer-generated (photoreal 3D-render look; AI generation **Inferred**) starring one recurring stylised female skeleton with a translucent body, word-group burned-in captions, 27 hard-cut shots, 55.1 s, product unnamed and only clearly shown in the final 1.2 s.

Beat ID	Start–end	Shot IDs	Content/action (Observed / Observed-captions)	Narrative role (inferred)	Why it works (inferred)	What kills it (inferred)	Evidence
B01	0.000–2.703	S01	Headline "Always Feeling BLOATED?" + caption "Every time you eat, it starts with a little bloating." Split-screen: hunched X-ray skeleton (red side) with a glowing belly that grows yellow→orange-red; upright skeleton (teal side); green gas cloud across the divider.	Hook — self-identification question + trigger→symptom statement	A yes/no question about a felt symptom lets the viewer self-select in under 3 s; the growing glow gives the eye a change to track while the sentence lands.	Opening on the product, a brand name or a generic "Hey guys" — the viewer gets no symptom to recognise and the curiosity gap closes before it opens.	Observed (frames 0.0–2.6), Observed-captions
B02	2.703–8.008	S02–S04	"Then your jeans feel tighter." / "Your stomach feels rock hard." / "Painful gas gets trapped inside." — one symptom per shot: jeans that won't close, hard belly in armchair, green gas filling torso.	Problem escalation (internal sensations)	Each line is a concrete bodily sensation a sufferer recognises, and each new shot ups the severity, so recognition compounds ("that's me… that too").	Collapsing the symptoms into one abstract line ("bloating is uncomfortable") or showing them in a single static shot — recognition happens once and stops.	Observed, Observed-captions

Beat ID	Start–end	Shot IDs	Content/action (Observed / Observed-captions)	Narrative role (inferred)	Why it works (inferred)	What kills it (inferred)	Evidence
B03	8.008–12.813	S05–S06	"Constant burping, passing gas." / "And that heavy feeling just won't go away." — visible gas from behind in armchair; pyjamas + sleep mask, holding a glass belly.	Problem escalation (outward, embarrassing symptoms) + persistence	Moving from private sensations to embarrassing outward signs raises emotional stakes; "won't go away" converts a symptom into a chronic problem.	Ending the symptom run on a mild symptom or on a solution tease — the persistence beat is what makes a fix feel needed.	Observed, Observed-captions
B04	12.813–23.157	S07–S12	"Soon, eating your favorite food starts feeling like a risk." / "You feel uncomfortable sitting, walking, working." / "And instead of enjoying your meal, you're waiting for the bloating to go away." — feast table; armchair; street walk; laptop; meal; bed edge.	Life impact / agitation	Shifts from "my body" to "my life" (food, movement, work, meals), widening what the problem costs; the rapid sitting/walking/working cuts make the impact feel everywhere.	Listing impacts verbally over one shot, or using a single location — the "everywhere in my day" feeling depends on one setting per item.	Observed, Observed-captions
B05	23.157–30.297	S13–S15	"Day after day, your gut feels swollen, sluggish, and uncomfortable, leaving you drained before your day is even over." — mirror reflection of bloated belly; inside-gut close-up with bubbles; head down on counter, exhausted.	Chronic agitation + emotional low point	"Day after day" plus exhaustion lands the emotional bottom right before the turn, making the pivot question feel like relief.	Skipping the low point and pivoting straight from symptoms to product — the solution arrives without built-up need.	Observed, Observed-captions
B06	30.297–33.300	S16	Caption "what if your gut has been asking for a different kind of support?" over a dark, sickly-green gut cutaway with toothy worm-like creatures.	Pivot / re-hook (reframe question)	A "what if" question reopens curiosity just as attention may dip; the most grotesque visual in the ad gives a jolt and names an "inner cause" without making a clinical claim.	Answering with a hard claim ("bloating is caused by parasites") or showing the product here — it turns curiosity into a claim the viewer can reject.	Observed, Observed-captions
B07	33.300–35.836	S17	"Just 2 to 3 drops in your navel every day" — skeleton lying in white bed, applying a dropper to the navel; a golden drop visible in the navel (~34.5 s).	Product introduction as usage ritual (product unnamed)	Leading with an easy, specific ritual ("just 2 to 3 drops") lowers perceived effort before any name or price appears.	Opening the solution with brand name, packshot or price — it reads as an ad switch and loses the story frame.	Observed, Observed-captions
B08	35.836–37.971	S18	"can help support healthy digestion," — stylised organs; a glowing green-yellow line travels stomach→intestines while the camera pulls back.	Mechanism visual + hedged benefit claim	Seeing "where it goes" makes an invisible effect feel tangible; "can help support" keeps the claim hedged.	Replacing the moving glow path with a static infographic, or hardening the claim to "cures/eliminates" — less vivid and riskier.	Observed, Observed-captions
B09	37.971–49.249	S19–S24	"and leave your gut feeling lighter and more comfortable." / "No more feeling heavy after every meal." / "No more worrying about gas or bloating," / "just a lighter stomach, smoother digestion and the comfort to enjoy your day." — thumbs-up; old negative states (desk, bed); intestines; blue X-ray; stretching in bed.	Desired outcome / benefits with "No more" contrast	The "No more…" lines are shown over the old negative state, so the viewer re-feels the pain the solution removes; the benefit triad ends on emotional relief.	Showing only happy outcome shots under "No more" — the contrast disappears and benefits read as generic claims.	Observed, Observed-captions
B10	49.249–53.887	S25–S26	"Add 2 to 3 drops to your daily routine and give your gut the natural support it deserves." — standing in bathroom applying dropper; golden spiral glow, then golden burst expelling dark particles.	Usage restated + transformation payoff	Repeating the dosage fixes the ritual in memory; the burst VFX is the visual payoff of the B06 "inner cause".	Dropping the second usage line or the cleansing visual — the ad ends without a clear "do this" or without closing the B06 loop.	Observed, Observed-captions

Beat ID	Start–end	Shot IDs	Content/action (Observed / Observed-captions)	Narrative role (inferred)	Why it works (inferred)	What kills it (inferred)	Evidence
B11	53.887–55.055	S27	"Order yours today." — skeleton holds amber dropper bottle up at shoulder height in white-tile bathroom, smiling.	CTA + only clear packshot	A 3-word imperative with the first clear product view makes the product the final memory; short duration avoids a hard-sell feel.	A long end card with offer stacking, price and URL text — breaks the narrated-story rhythm.	Observed, Observed-captions

Why this rhythm (inferred): the problem half (S01–S16, 0–33.3 s, mean shot 2.08 s) uses one shot per caption sentence so recognition builds line by line; quick-cut lists (S08–S10: 0.63–1.60 s; S22–S24: 1.17–1.70 s) speed up at the two list moments to signal "everywhere / everything"; the solution half (S17–S27, mean 1.98 s) keeps nearly the same speed but adds light/VFX motion and an audio bed, so energy rises without faster cutting.

Pacing summary: `Hook 2.70 s → Body 51.18 s (problem 30.60 s + solution 20.59 s) → CTA 1.17 s | Mean shot duration: 2.04 s | 27 shots total`

C. Hook Specification

Opening hook boundary: 0.000–2.703 (S01). Reason: the headline appears only in S01, the first caption sentence completes at ~2.67 s, and the first cut to S02 starts the symptom list. The re-hook at 30.297 (H04) is listed separately.

Hook ID	Channel	Start–end	Original text/action	Word count + tokens	Line breaks/reveal	Delivery/exposure	Evidence
H01	Headline (on-screen copy)	0.000–2.703	`Always Feeling BLOATED?`	**3 words** — [Always] [Feeling] [BLOATED?]	One line, two styles: "Always Feeling" white bold condensed sans; "BLOATED?" gold/yellow bold serif all caps; top ~10% of frame, centred	Static for the whole of S01 (~2.70 s); no entrance animation seen in sampled frames; gone at the S02 cut	Observed (frames 0.03, 0.5–2.6)
H02	Spoken VO (caption-derived) + mirrored captions	0.000–~2.67	`Every time you eat, it starts with a little bloating.`	**10 words (caption-derived)** — [Every] [time] [you] [eat,] [it] [starts] [with] [a] [little] [bloating.]	Six caption states: "Every time" 0.00 / "you eat," 0.50 / "it starts" 1.17 / "with a" 1.67 / "little" 1.83 / "bloating." 2.17	~3.7 words/s (caption-derived); audio dip at 0.9–1.0 s matches the comma after "eat,"	Observed-captions; VO wording Unknown — not transcribed
H03	Visual	0.000–2.703	Split-screen with a thin vertical divider. Left (dark red): hunched blue X-ray skeleton, hand on belly, red glow at the head, belly glow grows from a small yellow patch to a large orange-red sphere with a green rim. Right (teal): upright X-ray skeleton with a faint green gut. A green gas cloud sits across the divider at hip height.	n/a	Glow growth = progressive reveal across the shot (V22)	Static camera; only the glow and gas animate	Observed
H04	Re-hook: caption-derived VO + visual	30.297–33.300	`what if your gut has been asking for a different kind of support?` over the dark creature-filled gut (S16)	**13 words (caption-derived)** — [what] [if] [your] [gut] [has] [been] [asking] [for] [a] [different] [kind] [of] [support?]	Seven caption states, 30.50–32.50; "what" shown lowercase for ~1 sample (≈0.17 s)	Question form; the tone break comes from the darkest visual in the ad	Observed-captions, Observed

H01 (3 words) and H02 (10 words) are **separate constraints** and must not be merged. The captions in H02 transcribe the speech; they are not a second headline.

> **Works because (inferred):** a 3-word yes/no symptom question (H01) lets the right viewer self-identify instantly, while the 10-word trigger→symptom sentence (H02) describes a routine moment ("every time you eat") with gentle understatement ("a little bloating") that the next beats escalate. The split-screen "suffering vs. fine" comparison (H03) visually promises a before/after without showing a product, and the stylised X-ray look reads as an educational explainer rather than an ad (native-content feel). **Kills it (inferred):** naming or showing the product in S01; replacing the yes/no question with a statement ("Bloating sucks"); stretching the headline beyond 3 words or the VO line well beyond 10; dropping the split-screen comparison for a single figure; or starting with the most extreme symptom, which leaves the escalation in S02–S06 nowhere to go.

D. Script & Audio

D1. Vertical script blocks

```
[SPOKEN VO — caption-derived; audio NOT transcribed, wording unverified]
A01  0.00–2.67s:   "Every time you eat, it starts with a little bloating."  (10 words)
A02  2.67–4.17s:   "Then your jeans feel tighter."  (5 words)
A03  4.17–6.00s:   "Your stomach feels rock hard."  (5 words)
A04  6.00–8.00s:   "Painful gas gets trapped inside."  (5 words)
A05  8.00–10.17s:  "Constant burping, passing gas."  (4 words)
A06  10.17–12.83s: "And that heavy feeling just won't go away."  (8 words)
A07  12.83–16.50s: "Soon, eating your favorite food starts feeling like a risk."  (10 words)
A08  16.50–19.33s: "You feel uncomfortable sitting, walking, working."  (6 words)
A09  19.33–23.17s: "And instead of enjoying your meal, you're waiting for the bloating to go away."  (14 words)
A10  23.17–27.67s: "Day after day, your gut feels swollen, sluggish, and uncomfortable,"  (10 words)
A11  27.67–30.50s: "leaving you drained before your day is even over."  (9 words)
A12  30.50–33.33s: "what if your gut has been asking for a different kind of support?"  (13 words)
A13  33.33–35.83s: "Just 2 to 3 drops in your navel every day"  (10 words)
A14  35.83–38.00s: "can help support healthy digestion,"  (5 words)
A15  38.00–40.67s: "and leave your gut feeling lighter and more comfortable."  (9 words)
A16  40.67–42.83s: "No more feeling heavy after every meal."  (7 words)
A17  42.83–45.00s: "No more worrying about gas or bloating,"  (7 words)
A18  45.00–49.17s: "just a lighter stomach, smoother digestion and the comfort to enjoy your day."  (13 words)
A19  49.17–53.83s: "Add 2 to 3 drops to your daily routine and give your gut the natural support it deserves."  (18 words)
A20  53.83–55.06s: "Order yours today."  (3 words)
Total caption-derived words: 171 (problem half A01–A12: 99 | solution half A13–A20: 72) — ~3.1 words/s over 55.06 s

[ON-SCREEN TEXT]
V01  0.00–2.70s:   Headline "Always Feeling BLOATED?" (white condensed sans + gold serif caps, top ~10%) — S01 only
V02  0.00–2.67s:   Captions: "Every time" 0.00 / "you eat," 0.50 / "it starts" 1.17 / "with a" 1.67 / "little" 1.83 / "bloating." 2.17
V03  2.67–4.17s:   "Then your" 2.67 / "jeans feel" 3.17 / "tighter." 3.83
V04  4.17–6.00s:   "Your stomach" 4.17 / "feels rock" 4.83 / "hard." 5.50
V05  6.00–8.00s:   "Painful gas" 6.00 / "gets trapped" 6.83 / "inside." 7.33
V06  8.00–10.17s:  "Constant" 8.00 / "burping," 8.67 / "passing gas." 9.17
V07  10.17–12.83s: "And that" 10.17 / "heavy feeling" 10.67 / "just won't" 11.33 / "go away." 12.00
```

```
V08  12.83–16.50s: "Soon, eating" 12.83 / "your" 14.00 / "favorite food" 14.17 / "starts feeling" 14.83 / "like a risk." 15.50
V09  16.50–19.33s: "You feel" 16.50 / "uncomfortable" 16.83 / "sitting," 17.67 / "walking," 18.17 / "working." 18.67
V10  19.33–23.17s: "And instead" 19.33 / "of enjoying" 20.00 / "your meal," 20.50 / "you're waiting" 21.00 / "for the" 21.50 / "bloating" 21.83 / "to go away." 22.33
V11  23.17–27.67s: "Day after day," 23.17 / "your gut feels" 24.33 / "swollen," 25.17 / "sluggish," 26.00 / "and" 26.67 / "uncomfortable," 27.00
V12  27.67–30.50s: "leaving you" 27.67 / "drained before" 28.33 / "your day is" 29.00 / "even over." 29.67
V13  30.50–33.33s: "what" 30.50 / "if your gut" 30.67 / "has been" 31.17 / "asking" 31.50 / "for a" 31.83 / "different kind" 32.00 / "of support?" 32.50
V14  33.33–35.83s: "Just 2" 33.33 / "to 3 drops" 33.83 / "in your navel" 34.50 / "every day" 35.17
V15  35.83–38.00s: "can help" 35.83 / "support" 36.33 / "healthy" 36.67 / "digestion," 37.17
V16  38.00–40.67s: "and leave" 38.00 / "your gut" 38.33 / "feeling" 38.83 / "lighter" 39.17 / "and more" 39.50 / "comfortable." 40.00
V17  40.67–42.83s: "No more" 40.67 / "feeling heavy" 41.17 / "after" 41.83 / "every meal." 42.17
V18  42.83–45.00s: "No more" 42.83 / "worrying" 43.17 / "about gas" 43.50 / "or bloating," 44.33
V19  45.00–49.17s: "just a lighter" 45.00 / "stomach," 45.83 / "smoother" 46.33 / "digestion" 46.83 / "and the" 47.50 / "comfort" 47.83 / "to enjoy" 48.17 / "your
day." 48.67
V20  49.17–53.83s: "Add 2" 49.17 / "to 3 drops to" 49.67 / "your daily" 50.50 / "routine" 51.00 / "and" 51.33 / "give your gut" 51.67 / "the natural" 52.33 /
"support" 52.83 / "it deserves." 53.17
V21  53.83–55.06s: "Order yours" 53.83 / "today." 54.50
(No logo, price, URL, brand name or offer text appears at any point.)

[AUDIO]
Music:    Unknown — not listened to. Measured: no continuous bed fills phrase gaps before ~33.5 s (gaps dip to about −33 to −41 dBFS RMS); from ~34.0 s a sustained
tonal band (~600–800 Hz) appears on the spectrogram and no gap drops below −32 dBFS after 33.5 s — consistent with music or a pad entering at the solution turn
(Inferred)
SFX:      Unknown — none identifiable from measurements alone
Silence:  No silence ≥0.25 s anywhere (−35 dB threshold). Short phrase gaps (0.1–0.4 s) cluster at the cuts in the first half: ~2.6–2.7, 4.1, 5.8–6.0, 7.8–8.0, 10.0–
10.2, 12.5–12.8, 16.1–16.4, 19.2–19.5, 23.0–23.2, 25.8–26.0, 27.6–27.7, 30.1–30.3, 33.1–33.3 s
Voice delivery: Unknown — not listened to. Average level rises from ~−22.6 dBFS RMS (0–33 s) to ~−18.5 dBFS RMS (35–53 s) (Observed measurement)
```

D2. Script + Audio event table

Note: because the captions are the only evidence of the speech, each sentence is shown as one row that pairs the caption-derived speech (A) with its caption (V). This keeps the verified caption separate from the unverified VO without repeating the text in two rows. The speech is never counted twice.

Event ID	Start–end	Shot IDs	Channel/type	Original content or labelled paraphrase	Word count	Delivery/sound notes	Evidence
V01	0.00–2.70	S01	Headline	"Always Feeling BLOATED?"	3	Static, top-centred, two-style	Observed
A01 / V02	0.00–2.67	S01	VO ‖ caption	"Every time you eat, it starts with a little bloating."	10	Gap at ~0.9–1.0 s (after "eat,")	Observed-captions; VO Unknown
A02 / V03	2.67–4.17	S02	VO ‖ caption	"Then your jeans feel tighter."	5	Gap ~4.1 s before cut	Observed-captions
A03 / V04	4.17–6.00	S03	VO ‖ caption	"Your stomach feels rock hard."	5	Gap 5.8–6.0 s at cut	Observed-captions
A04 / V05	6.00–8.00	S04	VO ‖ caption	"Painful gas gets trapped inside."	5	Gap 7.8–8.0 s at cut	Observed-captions
A05 / V06	8.00–10.17	S05	VO ‖ caption	"Constant burping, passing gas."	4	Gap 9.1–9.2 s (comma); 10.0–10.2 s	Observed-captions

Event ID	Start–end	Shot IDs	Channel/type	Original content or labelled paraphrase	Word count	Delivery/sound notes	Evidence
A06 / V07	10.17–12.83	S05→S06	VO ‖ caption	"And that heavy feeling just won't go away."	8	"And that" starts ~0.1 s before the S06 cut	Observed-captions
A07 / V08	12.83–16.50	S07	VO ‖ caption	"Soon, eating your favorite food starts feeling like a risk."	10	Longest shot (3.64 s) carries one full sentence	Observed-captions
A08 / V09	16.50–19.33	S08–S10	VO ‖ caption	"You feel uncomfortable sitting, walking, working."	6	"walking,"/"working." land on the S09/S10 cuts (±0.15 s)	Observed-captions, Observed
A09 / V10	19.33–23.17	S11–S12	VO ‖ caption	"And instead of enjoying your meal, you're waiting for the bloating to go away."	14	Longest sentence; cut to S12 at "you're waiting"	Observed-captions
A10 / V11	23.17–27.67	S13–S14	VO ‖ caption	"Day after day, your gut feels swollen, sluggish, and uncomfortable,"	10	Cut to the inside-gut view at "swollen,"	Observed-captions
A11 / V12	27.67–30.50	S15	VO ‖ caption	"leaving you drained before your day is even over."	9	Gap 30.1–30.3 s at cut	Observed-captions
A12 / V13	30.50–33.33	S16	VO ‖ caption	"what if your gut has been asking for a different kind of support?"	13	Question; gap 33.1–33.3 s at cut	Observed-captions
A13 / V14	33.33–35.83	S17	VO ‖ caption	"Just 2 to 3 drops in your navel every day"	10	Bed change begins ~34.0 s (A22)	Observed-captions
A14 / V15	35.83–38.00	S18	VO ‖ caption	"can help support healthy digestion,"	5	Hedged claim wording	Observed-captions
A15 / V16	38.00–40.67	S19	VO ‖ caption	"and leave your gut feeling lighter and more comfortable."	9	—	Observed-captions
A16 / V17	40.67–42.83	S20	VO ‖ caption	"No more feeling heavy after every meal."	7	Over a negative-state visual	Observed-captions, Observed
A17 / V18	42.83–45.00	S21	VO ‖ caption	"No more worrying about gas or bloating,"	7	Over a negative-state visual	Observed-captions, Observed
A18 / V19	45.00–49.17	S22–S24	VO ‖ caption	"just a lighter stomach, smoother digestion and the comfort to enjoy your day."	13	Triad items land near the S23/S24 cuts	Observed-captions
A19 / V20	49.17–53.83	S25–S26	VO ‖ caption	"Add 2 to 3 drops to your daily routine and give your gut the natural support it deserves."	18	Longest sentence; S26 burst cut at "and"	Observed-captions
A20 / V21	53.83–55.06	S27	VO ‖ caption	"Order yours today."	3	Ends at video end	Observed-captions
A21	0.0–33.3	S01–S16	Audio — phrase gaps	13 short gaps (−33 to −41 dBFS RMS) aligned with cuts/sentence ends	—	Cuts are placed on speech pauses (Inferred)	Observed (measurement)
A22	~34.0–55.1	S17–S27	Audio — bed change	Sustained ~600–800 Hz tonal band; no gaps below −32 dBFS; level +~4 dB	—	Music/pad entering at the solution turn (Inferred; not listened to)	Observed (spectrogram/RMS)

E. Shot Cards

All transitions are hard cuts. Timings are frame-verified cut points; "~" = duration.

```
S01  0.000–2.703s  [~2.70s]  |  Beat: B01  |  Transition in: none (open)  →  out: cut
Composition:  Split-screen, thin vertical divider; full-body X-ray skeletons; left hunched 3/4 view, right upright profile; headline top ~10%, captions ~74% height
Action:       Static figures; left belly glow grows small yellow → large orange-red with green rim; green gas cloud between figures
Look:         Blue translucent X-ray render; left bg dark red, right bg teal; red glow at left head; high contrast
Events:       V01 (headline 0.00–2.70), V02 (captions), V22 (glow growth), A01
Why this framing (inferred): A side-by-side "suffering vs. fine" frame sets up the before/after promise in one image without showing a product.

S02  2.703–4.204s  [~1.50s]  |  Beat: B02  |  in: cut  →  out: cut
Composition:  Medium, frontal, waist-up to thighs; character centred; warm living room with bookshelves and lamp, shallow depth
Action:       Skeleton (auburn hair, orange headband) tugs at unfastened jeans under a bulging skin-textured belly
Look:         Photoreal 3D render, warm tungsten, soft background blur
Events:       V03, A02
Why this framing (inferred): A universal "jeans won't close" moment, framed tight on the waistband, makes the symptom instantly relatable.

S03  4.204–5.939s  [~1.74s]  |  Beat: B02  |  in: cut  →  out: cut
Composition:  Medium-wide, slightly high angle; seated in floral armchair; fireplace with family photos, candle, tea
Action:       Hands cradle a large, hard-looking rounded belly; head tilts down
Look:         Warm amber interior, cosy domestic set dressing
Events:       V04, A03
Why this framing (inferred): A cosy home set against a distended belly contrasts comfort with discomfort, so the symptom reads as invading normal life.

S04  5.939–8.008s  [~2.07s]  |  Beat: B02  |  in: cut  →  out: cut
Composition:  Medium, seated on grey sofa; glass-like torso shell reveals intestines filled with green gas
Action:       Green gas thickens inside the torso and spills out at the lower right by ~7.5s
Look:         Neutral warm room, saturated green gas against beige bones
Events:       V05, V23 (gas spill), A04
Why this framing (inferred): The translucent body makes "trapped gas" visible, turning an invisible sensation into something the viewer can see.

S05  8.008–10.277s  [~2.27s]  |  Beat: B03  |  in: cut  →  out: cut
Composition:  Medium-wide, side profile; perched on edge of floral armchair (same room as S03)
Action:       Yellow-green gas cloud expels from behind; head turns slightly
Look:         Warm interior, green gas accent
Events:       V06, start of V07, A05, A06 (start)
Why this framing (inferred): Side profile makes the embarrassing outward symptom legible but comic, softening the embarrassment.

S06  10.277–12.813s  [~2.54s]  |  Beat: B03  |  in: cut  →  out: cut
Composition:  Medium, frontal, standing in bedroom; mustard polka-dot pyjamas, sleep mask on forehead; clear glass bowl belly showing intestines
Action:       Both hands rub the glass belly
Look:         Dim bedroom with bedside lamp, warm mustard palette
Events:       V07, A06
Why this framing (inferred): Pyjamas and a sleep mask place the problem at night/bedtime, extending "won't go away" across the whole day.

S07  12.813–16.450s  [~3.64s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Medium, slightly low angle across a feast table (roast turkey, pasta, sides); character leaning back in chair
Action:       Eyes closed, hand on swollen glass belly with visible intestines; minimal movement
```

```
Look:         Rich warm dining room, gold curtains, high food saturation
Events:       V08, A07
Why this framing (inferred): Abundant favourite food in the foreground against a suffering eater visualises "food feels like a risk".

S08  16.450–18.051s  [~1.60s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Medium, seated in armchair, chin in hand; tissues and tea on side table
Action:       Blue-eyed skeleton looks fed up/bored; slight head movement
Look:         Warm living room
Events:       V09 ("You feel uncomfortable sitting,"), A08
Why this framing (inferred): A classic "fed up" pose gives the emotional state before the rapid list.

S09  18.051–18.685s  [~0.63s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Full body, frontal, walking toward camera down a sunlit city street; shorts and sneakers
Action:       Walks while clutching belly
Look:         Only exterior daylight shot; cooler daylight with warm sun
Events:       V09 ("walking,"), A08
Why this framing (inferred): One exterior shot for "walking" proves the problem follows her out of the house; the short hold matches the list rhythm.

S10  18.685–19.386s  [~0.70s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Medium, at desk with laptop and mug; hand on forehead
Action:       Types while looking stressed
Look:         Warm lamp-lit home office
Events:       V09 ("working."), A08
Why this framing (inferred): A literal visual for "working" keeps word-picture sync tight during the fast list.

S11  19.386–21.021s  [~1.64s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Medium, seated at a small dining table with naan, curry and salad; glass torso with intestines
Action:       Looks down at belly instead of eating; hand on stomach
Look:         Warm dining nook
Events:       V10 ("And instead of enjoying your meal,"), A09
Why this framing (inferred): A plate she isn't eating makes "instead of enjoying" visible.

S12  21.021–23.157s  [~2.14s]  |  Beat: B04  |  in: cut  →  out: cut
Composition:  Medium, seated on edge of dark bed, frontal; glass belly with intestines and a small white oval (pill-like) visible
Action:       Holds belly, head down, waiting
Look:         Dim, moody bedroom, low key
Events:       V10 ("you're waiting for the bloating to go away."), V24 (white oval in gut), A09
Why this framing (inferred): A dark, still frame with a pill-like object suggests "waiting it out" and that previous fixes haven't worked.

S13  23.157–25.826s  [~2.67s]  |  Beat: B05  |  in: cut  →  out: cut
Composition:  Over-the-shoulder mirror shot: back of character in grey joggers foreground left; reflection centre shows bloated glass belly packed with pebble-like
contents
Action:       Hands on belly, examining reflection; near-static camera
Look:         Soft daylight bedroom, neutral palette
Events:       V11 ("Day after day, your gut feels swollen,"), A10
Why this framing (inferred): The mirror makes self-scrutiny and body image part of the problem, deepening the emotional stakes.

S14  25.826–27.728s  [~1.90s]  |  Beat: B05  |  in: cut  →  out: cut
Composition:  Close-up inside view under the ribcage; intestines fill the frame; pelvis at bottom
Action:       Gas bubbles rise and drift; specks of debris
```

```
Look:         Stylised anatomical render, pink intestines, teal bubbles
Events:       V11 ("sluggish, and uncomfortable,"), A10
Why this framing (inferred): Cutting inside the body on "sluggish" shows the hidden cause the pivot question will name.

S15  27.728–30.297s  [~2.57s]  |  Beat: B05  |  in: cut  →  out: cut
Composition:  Medium close-up, head resting on folded arms on a wooden counter; white tile wall
Action:       Eyes closed, exhausted; static
Look:         Soft daylight, white/wood palette
Events:       V12, A11
Why this framing (inferred): A slumped head-down pose is the emotional low point that the "what if" pivot relieves.

S16  30.297–33.300s  [~3.00s]  |  Beat: B06  |  in: cut  →  out: cut
Composition:  Extreme close-up inside a dark, sickly-green gut; large bone shapes frame the top; worm-like creatures with teeth among the intestines
Action:       Creatures wriggle and grin; slow movement
Look:         Darkest, most desaturated shot; teal-green and grey, horror-tinged
Events:       V13 ("what if…of support?"), H04, A12
Why this framing (inferred): A shock visual at the pivot re-grabs attention and implies an "inner cause" without stating it as fact.

S17  33.300–35.836s  [~2.54s]  |  Beat: B07  |  in: cut  →  out: cut
Composition:  Medium, high angle over a skeleton lying in a white bed; white subway tile behind; skin belly visible under ribs
Action:       Holds a dropper over the navel; a golden drop sits in the navel by ~34.5s
Look:         Bright, clean white palette; first bright solution shot
Events:       V14 ("Just 2 to 3 drops in your navel every day"), V25 (golden drop), A13, A22 begins ~34.0s
Why this framing (inferred): A calm, bright bedtime ritual signals the solution has arrived and makes usage look effortless.

S18  35.836–37.971s  [~2.14s]  |  Beat: B08  |  in: cut  →  out: cut
Composition:  Stylised clean organs (liver, stomach, intestines) filling the frame; ends wider with a torso silhouette visible
Action:       A glowing green-yellow line travels from stomach through the intestines; camera pulls back
Look:         Bright, saturated pink/red organs with luminous trail; clean render (contrast with S14/S16)
Events:       V15, V26 (glow path), A14
Why this framing (inferred): A moving light path makes the product's effect visible and traceable, the positive counterpart to S16.

S19  37.971–40.607s  [~2.64s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Medium, frontal, standing in living room; clear empty glass torso (no bloat)
Action:       Smiling, double thumbs up, slight bounce
Look:         Warm, bright living room
Events:       V16, A15
Why this framing (inferred): A flat, empty, clear belly and thumbs-up show the outcome literally against the earlier swollen bellies.

S20  40.607–42.843s  [~2.24s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Medium, at desk with laptop and pill bottle; glass belly full of brown intestines
Action:       Hand on head, grimacing, hand on belly (negative state)
Look:         Warm, dim office
Events:       V17 ("No more feeling heavy after every meal."), A16
Why this framing (inferred): Showing the old pain under "No more" makes the benefit a contrast the viewer feels.

S21  42.843–45.078s  [~2.24s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Medium, high angle, lying in white bed; glass belly with green fluid and intestines
Action:       Wide-eyed, worried expression; static
Look:         Bright white bedroom; green fluid accent
```

```
Events:       V18 ("No more worrying about gas or bloating,"), A17
Why this framing (inferred): A second "No more" contrast keeps the old worry visible right before the relief triad.

S22  45.078–46.246s  [~1.17s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Close-up inside view under the ribs; clean, calm intestines
Action:       Gentle movement
Look:         Warm, clean anatomical render (healthy version of S14)
Events:       V19 ("just a lighter stomach,"), A18
Why this framing (inferred): A clean inside view mirrors the earlier troubled one, closing the visual problem→solution loop.

S23  46.246–47.547s  [~1.30s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Frontal X-ray of the digestive tract, stomach top centre
Action:       Intestines glow and shimmer cyan
Look:         Blue X-ray palette (echoes S01 right side)
Events:       V19 ("smoother digestion"), A18
Why this framing (inferred): A glowing blue X-ray tract signals "working smoothly" in the same medical look as the hook.

S24  47.547–49.249s  [~1.70s]  |  Beat: B09  |  in: cut  →  out: cut
Composition:  Medium, sitting up in white bed against white tile; plant and candle
Action:       Stretches both arms overhead, then settles with hands behind head, relaxed
Look:         Bright, airy white palette
Events:       V19 ("and the comfort to enjoy your day."), A18
Why this framing (inferred): A morning stretch is shorthand for relief and a good day ahead.

S25  49.249–51.485s  [~2.24s]  |  Beat: B10  |  in: cut  →  out: cut
Composition:  Medium-full, frontal, standing in a spa-like bathroom (towels, candles, plants); translucent body
Action:       Applies dropper to navel; golden spiral glow rises through the pelvis/spine
Look:         Warm candle glow, gold light accent
Events:       V20 ("Add 2 to 3 drops to your daily routine"), A19
Why this framing (inferred): A ritual-like bathroom setting frames usage as self-care, not medicine.

S26  51.485–53.887s  [~2.40s]  |  Beat: B10  |  in: cut  →  out: cut
Composition:  Same framing/set as S25
Action:       Golden energy bursts through the torso; dark particles fly out and away; character wide-eyed, smiling
Look:         Intense gold VFX against warm bathroom
Events:       V20 ("and give your gut the natural support it deserves."), V27 (burst + particles), A19
Why this framing (inferred): A dramatic cleansing burst is the visual payoff of the "inner cause" introduced in S16.

S27  53.887–55.055s  [~1.17s]  |  Beat: B11  |  in: cut  →  out: end
Composition:  Medium, frontal; white tile bathroom with sink; product held up at shoulder height, frame left
Action:       Holds an amber glass dropper bottle (cream label, gold collar; label text illegible), smiling, eyes toward bottle
Look:         Bright white palette, warm skin-tone organs in torso
Events:       V21 ("Order yours today."), V28 (first clear packshot), A20
Why this framing (inferred): The first clear product view is held next to the character's happy face, linking product to relief at the CTA.
```

F. Art Direction

- **Medium & realism:** Fully computer-generated, photoreal 3D-render look (AI-generated — Inferred). One recurring character: a stylised female skeleton with long wavy auburn hair and an orange/mustard terry headband (sleep mask in S06), often with a translucent glass-like body shell that shows organs. Mostly static or slowly drifting camera; motion comes from character gestures, gas/light effects and one pull-back (S18). Five inside-the-body cutaways (S14, S16, S18, S22, S23) plus the X-ray hook (S01).
- **Palette:** Problem half: warm amber/tungsten domestic interiors, dim bedrooms, with green gas as the recurring symptom signifier and the darkest teal-green in S16. Solution half: introduces bright white tile/white bedding settings (S17, S21, S24, S25, S27) and luminous accents — green-yellow trail (S18), cyan X-ray (S23), gold glow/burst (S25–S26).
- **Typography:** Captions: white bold italic serif with soft drop shadow, centred at ~74% of frame height, 1–4 words per state, sentence punctuation kept, mixed case (one lowercase sentence start, "what"). Headline (S01 only): "Always Feeling" white bold condensed sans + "BLOATED?" gold/yellow bold serif caps, top ~10%. No other graphics, logos, prices or URLs.
- **Transitions:** Hard cuts only (27 shots). Cuts fall on speech pauses in the first half (A21) and on list items (S08–S10, S22–S24). S25→S26 is a hard cut within the same framing, used to start the VFX burst.
- **Product presentation:** Never named in copy. First implied in S17 (dropper at navel, bottle not clearly visible), applied again in S25, and shown clearly only in S27 (amber dropper bottle, cream label, gold collar) for ~1.17 s.
- **Visual signature:** One consistent, slightly comic skeleton heroine with a see-through body acts out each caption line literally in warm, cosy home settings, cut against inside-the-body views of what's going wrong. The problem half is dim, warm and green-gassed; the solution half turns bright white with glowing light effects. White italic serif captions in word-sized bursts carry the narration throughout.

G. Reference Rules Sheet

Rule ID	Source IDs/time	Feature	Reference value	Priority	Why it works (inferred)	Anti-pattern — what kills it	Evidence/uncertainty	Verification method
R01	H01, V01, 0.00–2.70	Headline hook	3-word yes/no symptom question; "Always Feeling" white condensed sans + "[PROBLEM WORD]?" gold serif caps; top ~10%; S01 only	Preserve (structure) / Replace for our product (problem word)	A 3-word question is readable in under a second and lets the target viewer self-select.	A headline of 6+ words, a statement instead of a question, or a brand/product name in the headline.	Observed	Count tokens = 3; check it ends in "?" and the exit is at the first cut
R02	H02, A01/V02, 0.00–2.67	Spoken hook line	10 tokens, pattern "Every time you [routine trigger], it starts with a little [symptom]."	Preserve count / Replace for our product (trigger, symptom)	Grounds the problem in a routine moment and understates it so later beats can escalate.	Opening with the most extreme symptom or a 15+ word sentence; mismatching the 10-token count.	Caption-derived; VO wording unverified	Token count = 10; confirm against audio when available
R03	H03, S01, V22	Hook visual	Split-screen: suffering figure (dark red) vs. fine figure (teal); X-ray look; problem-area glow grows during the shot	Preserve	Promises a before/after in one frame and gives the eye a change to track.	A single figure on a plain background, or a static glow with no growth.	Observed	Frame check at 0.0 and 2.6 s: two figures, divider, glow size increase

Rule ID	Source IDs/time	Feature	Reference value	Priority	Why it works (inferred)	Anti-pattern — what kills it	Evidence/uncertainty	Verification method
R04	B01, 0.00–2.70	Hook length	~2.70 s, one shot, cut on the sentence end	Preserve	A short single-shot hook delivers one complete idea before the first cut.	A hook spanning several shots, or cutting mid-sentence.	Observed (frame-verified cut)	First cut between 2.5 and 2.9 s, after the hook sentence completes
R05	B02–B03, S02–S06	Symptom escalation ladder	5 sentences (5/5/5/4/8 tokens), one shot each (1.50–2.54 s), private → embarrassing → persistent ("just won't go away")	Preserve (structure) / Replace for our product (symptoms)	Compounding recognition: each line is a new "that's me" and the severity climbs.	Listing all symptoms in one sentence or one shot; ending on a mild symptom.	Observed-captions	5 shots between hook and life-impact beat; last line expresses persistence
R06	B04, S08–S10, V09	List with one cut per item	"sitting, walking, working" — each item on its own literal visual; S09 0.63 s, S10 0.70 s; items land on cuts (±0.15 s)	Preserve	Fast cuts on list items make the problem feel present everywhere in the day.	Saying the list over a single shot, or visuals that don't match each word.	Observed, Observed-captions	Item onset within ±0.2 s of each cut; one setting per item
R07	B01–B06, 0–33.30	Problem/solution split	Problem 0–33.30 s (60.5%, 99 of 171 words); no product mention or visual before 33.30 s	Preserve	A long, emotionally built problem section makes the solution feel earned rather than pitched.	Introducing the product before ~50% of runtime, or a split under 50/50.	Observed	Timestamp of first product reference ≥ 60% of runtime
R08	H04, B06, S16, 30.30–33.30	Pivot question / re-hook	13-token "what if your [system] has been asking for a different kind of support?" over the darkest, most unsettling visual	Preserve (form) / Replace for our product (wording, visual subject)	A curiosity question re-hooks at the attention dip and reframes the problem without a hard claim.	A declarative cause claim ("it's caused by X") or showing the product here.	Observed-captions, Observed	Question form, 13 tokens; darkest-palette shot sits on this line
R09	B07, S17, A13	Product enters as a usage ritual	10 tokens "Just [amount] [form] [where/how] every day" — usage before name; product never named	Preserve (how-before-what) / Replace for our product (usage)	Specific, easy usage lowers effort perception before any selling.	Leading the solution with brand name, packshot, price or ingredients.	Observed-captions	First solution line describes usage; no brand name in copy
R10	A14/V15, A19/V20	Claim language	Hedged: "can help support", "natural support it deserves" — no cure/guarantee wording	Preserve	Hedged wording keeps claims supportable and avoids platform/compliance problems.	"Cures", "eliminates", "guaranteed", or clinical/diagnostic language.	Observed-captions	Scan copy for absolute claims; every benefit uses hedged verbs
R11	B08, S18, V26	Mechanism visual	Inside-body view with a glowing line travelling through the system while the camera pulls back	Preserve (device) / Replace for our product (system shown)	Makes an invisible effect traceable and is the clean opposite of the S16 problem view.	A static diagram, text-only claim, or ingredient list in place of the moving path.	Observed	Visual has a moving light trail across ≥1.5 s
R12	B09, S20–S21, A16–A17	"No more ___" contrast	Two 7-token "No more …" lines, each shown over the OLD negative state	Preserve	Re-shows the pain the solution removes, so the benefit lands as relief.	Showing happy shots under "No more" lines.	Observed, Observed-captions	Shots under "No more" depict the problem state

Rule ID	Source IDs/time	Feature	Reference value	Priority	Why it works (inferred)	Anti-pattern — what kills it	Evidence/uncertainty	Verification method
R13	B09, S22–S24, A18	Benefit triad with cuts	"just a lighter [X], smoother [Y] and the comfort to [Z]" — 13 tokens, one shot per item (1.17/1.30/1.70 s), ending on an emotional benefit	Preserve (structure) / Replace for our product (benefits)	Three quick benefit visuals echo the problem list and end on the feeling, not the function.	One long shot for all benefits, or ending on a functional benefit.	Observed-captions, Observed	3 cuts aligned with 3 items; last item is an emotional outcome
R14	B10, S26, V27	Transformation payoff VFX	Gold energy burst expelling dark particles on "give your gut the natural support it deserves"	Preserve (device) / Confirm suitability	Closes the S16 "inner cause" loop with a satisfying visual release.	Ending on a static product shot without a payoff visual.	Observed	VFX burst present in the second-to-last shot
R15	A13, A19	Usage repetition	Dosage stated twice ("2 to 3 drops"), at 33.3 s and 49.2 s	Preserve (repetition) / Replace for our product (usage)	Repetition makes the ritual memorable and actionable.	Stating usage only once, or changing the amount between mentions.	Observed-captions	Usage phrase appears twice, identical amount
R16	B11, S27, A20/V21	CTA	3-token imperative "Order yours today." ~1.17 s; first clear packshot held beside the happy character	Preserve	A short CTA with the first clear packshot makes the product the last memory without a hard sell.	A long end card with price/URL/offer stacking, or a packshot without the character.	Observed, Observed-captions	CTA = 3 tokens; final shot ≤1.5 s; product first clearly shown here
R17	All character shots	Recurring character	One consistent character (same hair, headband) in every character shot; translucent body to show inside	Preserve (consistency) / Confirm (character design for our audience)	A single consistent character makes 27 shots read as one story.	Switching characters or styles between shots.	Observed	Character identity check across all character shots
R18	S14, S16, S18, S22, S23	Inside-view cutaways	5 inside-the-body shots: 2 problem (S14, S16), 3 solution (S18, S22, S23), mirrored clean vs. troubled	Preserve	Paired inside views make the change visible and give the eye a novel picture.	Showing only exterior behaviour, or using inside views on one side only.	Observed	Count ≥2 problem and ≥2 solution inside views
R19	V02–V21	Caption style	White bold italic serif, soft drop shadow, centred ~74% height, 1–4 words per state, ~0.3–0.8 s per state, punctuation kept	Preserve	Word-sized bursts keep reading effortless with sound off and pace the narration.	Full-sentence subtitles, sans-serif captions, or captions in the bottom 10% safe-zone.	Observed (font family not identified)	Frame check of position, style and words per state
R20	S01–S27	Cut grammar and pacing	27 hard cuts, mean 2.04 s (range 0.63–3.64 s); in the first half cuts fall on speech pauses	Preserve	Cutting on pauses keeps the narration smooth while giving each sentence its own picture.	Dissolves/wipes, or cuts that split sentences mid-phrase.	Cuts frame-verified; pause alignment measured	Shot count 25–29; mean 1.8–2.3 s; cut vs. pause alignment
R21	A21–A22, ~34.0 s	Audio lift at solution	Gaps between phrases before ~33.5 s; continuous tonal bed and ~+4 dB level from ~34.0 s	Confirm	An audio lift at the turn signals "things get better" without words.	Same flat bed throughout, or music hitting before the problem is built.	Measured only — not listened to; music identity Unknown	Listen to the reference; confirm music entry time and style

Rule ID	Source IDs/time	Feature	Reference value	Priority	Why it works (inferred)	Anti-pattern — what kills it	Evidence/uncertainty	Verification method
R22	All shots	Palette shift	Problem: dim warm interiors + green gas; solution: bright white tile/bedding + gold/cyan glows	Preserve	The colour change tells the before/after story even with sound off.	One flat look for the whole ad, or bright settings in the problem half.	Observed	Compare average brightness/palette 0–33 s vs. 33–55 s
R23	A01–A20	VO wording, voice and delivery	Caption-derived wording only (171 words, ~3.1 words/s); voice type, gender, accent and emphasis Unknown	Confirm	n/a until heard. Captions very probably mirror the VO because caption changes track the audio pauses.	Treating caption text as verified VO and copying delivery assumptions without listening.	Audio not transcribed	Transcribe/listen; compare with D1
R24	S17, S25, S27, V28	Product slot	Amber dropper bottle, cream label, gold collar; brand illegible	Replace for our product	The product appears only as a ritual object and then a packshot.	Showing the reference's product or label.	Observed; brand Unknown	Our product appears only at S17/S25-equivalent usage and the final CTA shot

Status line:

```
Handoff:   Partial — unresolved: spoken VO wording/voice/delivery not transcribed (R23), music/SFX identity and entry not listened to (R21), product brand illegible
(R24), character design suitability (R17) and payoff VFX suitability (R14) need confirmation for our audience
Confirmed: 20 rules verified | 4 rules need confirmation (R14, R17, R21, R23)
Next stage needs: this report + audience research + performance insights + product/offer facts + creative assignment
```
